

GIJTR EVALUATION RUBRIC TEMPLATE

This evaluation rubric was developed using data collected during the annual Consortium meeting (during a collaborative design session) and partner feedback on a draft document. After reviewing notes from the Consortium meeting, additional partner feedback after the meeting, and supplementary documents (e.g., quarterly reports, external reports), performance descriptors were developed for categories related to Consortium activities.

How to read this document

Each table is divided by the quality / level of results (3-high; 2-satisfactory; 1-low or negative). In each table, performance descriptors—at the level identified for that table (e.g., 3-high)—were developed for each category (e.g., forensics, human rights documentation). When reading this document, you will need to reference each table to see every level for each performance descriptor.

When reviewing, it might be easiest to print this document on one-sided sheets, so you can compare the descriptors in each table against one another. This way, you can line up Table 3 (high performance) next to Table 2 (satisfactory performance) and Table 1 (low).

Using rubrics

Please note: (1) This rubric should be seen as a menu of options, as a way to build a custom project-specific rubric. Each partner should choose the performance descriptors that are most relevant for their project. If a project is related to memorialization and community engagement, then it is likely that the partner would select a few performance descriptors in these categories. It is not necessary to select all of the performance descriptors in each category. Also, if a project is related to memorialization, but not human rights documentation; then the partner would not need to select a descriptor from the latter category. (2) The performance descriptors in the rubric act as a guideline to think about the quality of outcomes, not quantity. If performance is quantifiable, please include performance indicators in the project M&E Plan.

At the start of each project (or, at the start of each evaluation), project staff will choose the performance descriptors that are most relevant for their activities. Project staff can select as many, or as few, descriptors. However, if the descriptor is relevant, please select it. These qualitative criteria are meant to supplement the quantitative indicators in project M&E Plans. While some project activities can be judged using quantitative indicators, many of the Consortium's activities need to be assessed using qualitative terms. The rubric goes beyond simple indicators; it provides specific criteria to assess the quality of results / outcomes (i.e., how good is good).

When finalizing project documents, partners can include their indicators (w/ quantitative targets) in their project-specific rubrics. This would provide one comprehensive evaluation rubric, with quantitative and qualitative targets. The descriptors should be seen as benchmarks, or targets, which the evaluator can use to rate the quality or success of a specific project component. These descriptors should aid the evaluator in drawing conclusions about project quality or success (i.e., aiding the interpretation of valuing success).

If a project-specific rubric is developed at the start of a project, it can be refined during project implementation so the measures are reliable (similarly to indicators in an M&E Plan). The rubric should be finalized before the evaluation starts. Each performance descriptor can be measured using various methods (e.g., interviews, focus groups, participatory community consultations). When selecting performance descriptors, Partners should add text to make each phrase more descriptive, if needed. Clear

GIJTR

Global Initiative for Justice,
Truth & Reconciliation

descriptors will aid evaluators and project teams in interpreting quality / success during the evaluation. Below, some text has been left highlighted, as those words or phrases likely need additional explanation from each Partner.

<p>3- Performance is clearly very strong or exemplary in relation to the key area. Any gaps or weaknesses are not significant and are managed effectively. There is always or nearly always evidence of the following:</p>	<p>2 - Performance meets satisfactory expectations / requirements as far as can be determined. Less significant gaps or weaknesses are mostly managed effectively:</p>	<p>1 - Performance is low in relation to the objective. Does not meet minimum expectations / criteria:</p>
<p>Forensics</p>		
<ul style="list-style-type: none"> • Documentation of processes and collection of evidence—e.g., ante-mortem interview, remains examination, excavations, exhumations, database, biological profile—exceed standard practice (possible to add certification or standard, or modify the list of processes). • Family members participate and meaningfully engage in the forensic investigative process. • Victims and affected communities believe that the forensics process is not only efficient and effective, but also legitimate. • Transitional justice mechanisms accept and use evidence from forensic investigative processes. • There is always evidence that contingency and risk mitigation plans are developed and used in cases where family members still believe loved ones are alive. See Community Engagement and 	<ul style="list-style-type: none"> • Documentation of processes and collection of evidence—e.g., ante-mortem interview, remains examination, excavations, exhumations, database, biological profile—meet standard practice (possible to add certification or standard). • Family members are consulted during the forensic investigative process. • Victims and affected communities believe that the forensics process is efficient and effective. • Transitional justice mechanisms accept evidence from forensic investigative processes. • There is some evidence that contingency plans and mitigation plans are developed and used in cases where family members still believe loved ones are alive. See Community Engagement and 	<ul style="list-style-type: none"> • Documentation of processes and collection of evidence—e.g., ante-mortem interview, remains examination, excavations, exhumations, database, biological profile—fall below standard practice (possible to add certification or standard). • Family members are not consulted during the forensic investigative process, or there is little evidence that this occurred. • Victims and affected communities do not believe that the forensics process is legitimate. • Transitional justice mechanisms do not accept evidence from forensic investigative processes. • There is little evidence that contingency plans and mitigation plans are developed and used in cases where family members still
